

DENTAL CHAIRS

sikelelela 
Medical / Dental / Pharmaceuticals

Model : Victor V100

Styled to last

The V100 is the result of solid industrial tradition and cutting-edge production methods. A concept that combines outstanding design and practicality. Smoothly styled lines define the geometry of materials specifically selected for their strength and capacity to give the unit exceptional stability.

Careful selection of construction materials, such as special plastics and a steel framework, gives the dental unit improved solidity and strength plus enhanced aesthetics.

Tuned into your needs

As soon as you switch it on, you know the V100 is the right choice. Instruments with spray anti-retraction. Dentist's module with ergonomic over-the-patient delivery. A positionable unit body that opens on both sides.

The V100 features a simple, effective pneumatic system for top reliability and durability. One switch controls electrical power, compressed air and water.

Instruments can also be activated/deactivated via the foot control, as can Chip Air and Chip Water functions.

Via their respective modules, both dentist and assistant can manage patient movement and the dynamics of the entire system.

Safe and sound

With the V100 you're in safe hands: in designing this dental unit, hygiene was given top priority. Built to limit the risks of contamination at source, the V100 unit also features active systems that provide maximum efficiency against bacterial proliferation. The instrument spray anti-retraction device reduces all risks of cross-infection. A 1.8 litre pressurized bottle ensures independent water feed. Through design, all hygiene procedures are made easy. The silicon tray and handpiece support mats on the dentist's module can be autoclaved. Both the filter, the cup and bowl fill unit can be removed to ensure thorough cleaning.

Model : Victor V200

Quality, design, reliability and genuine value for money. **VICTOR V series** is a new generation of treatment centres built according to strict manufacturing standards and based on a concept of maximum quality, minimum waste. Select materials and ergonomic design features are the result of over 30 years experience as a manufacturer of dental units.

Victor is proud to present a range of highly flexible, modern dental units incorporating solutions to improve your efficiency day after day.

Styled to last

New colours of the upholstery.

1	green	
2	dark blue	
3	yellow	
4	dark green	
5	blue	
6	dark red	
7	black	
8	orange	

The new patient chair shaping provides unhampered access for the dental team. The seat is longer than the previous version (+9 cm), increasing patient comfort.

The backrest incorporates a security device which detects obstacles while it is being reclined.

Tuned into your needs

Instrument holder designed to facilitate instrument positioning and pick-up.

Resistant upholstery with smooth wipe-clean surface

Dentist's control panels

Strong articulated headrest

Ergonomically designed stool

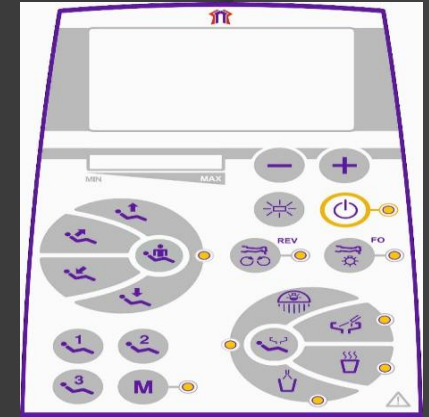

Tuned into your needs

Stress-free positioning thanks to easy orientation of the operating light around a triple axis. Natural light and colour temperature enable accurate viewing of the oral cavity. Very silent fan and autoclavable handles

Contamination-free operation can be achieved via the integrated foot control which incorporates the same functions as the hand-operated control panel.

Assistant's module with expandable instrument holder

Hygiene Care

Rotating ceramic cuspidor bowl is convenient for the patient and enables optimum hygiene care

The instrument support unit can be removed for cleaning and disinfection procedures.

Removable one-piece cup-and-bowl filling unit for simple disinfection.

Simply the best

The V300 is the complete Victor treatment centre. Providing all-round reliability and finely-targeted performance, this exclusive equipment is ready to boost your potential as a dental professional. The V300 dental unit provides instruments and technology specially designed for those performing conservative and prosthetic dentistry at the very highest levels.

Tuned into your needs

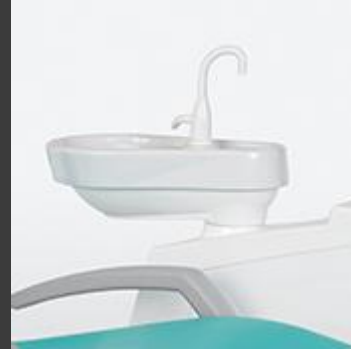

The V300 incorporates a LED bar on the dentist's module control panel to display dynamic instrument values, allowing closer operative control.

Silent, ultra-light, vibration-free and with a 1,000 – 40,000 rpm range, the NEXT induction micromotor is a technologically advanced instrument requiring very little maintenance.

The V300 features a powerful, silent hydraulic-lift patient chair with 2 pre-set and 4 programmable positions. Chair movement activates safety systems that shut down instruments and prevent risk of impact against obstruction during backrest lowering.

The assistant's side can include: 3-way syringe, surgical and saliva suction cannulae, intraoral camera or curing light.

No shortcuts to safety

On the V300 safety is paramount. Designed in Europe in compliance with clear-cut directives, the V300 features highly reliable, tested devices to prevent the risk of cross-contamination in the surgery.

Designed to provide passive defence against contamination, the dental unit makes cleaning tasks easier by incorporating numerous removable parts. All surfaces can be washed using special detergents.

Removing the unit body side panel gives access to the hygiene and suction systems, the air/water separator and the water heater. Checking fluid levels and routine maintenance are simple procedures.

Middle End Dental Chairs

Model : Nice one Dental chair

FREEDOM IN MOVEMENT

It is possible to move and handle the chair as desired. 7 programmable positions to perfectly match your needs with your work. It is possible to set 4 working positions in addition to the appropriate memorizing position setting for:

- Rinsing / last position with automatic ON / OFF op. lamp;
- Zero position;

Simply manageable: Recall most of the memorized positions directly by the pedal!

KEYBOARD

The NICEONE operator keyboard has a multifunctional and intuitive control panel. Just by simply touching the membrane with the operating panel icons, all the functions of the unit are activated.

All you need located in a small space, including the negatoscope!

CUSTOMIZATIONS

Customize your operating table by choosing the hanging hoses version. With the same features and predispositions but different work ergonomics, designed to support the movements to the best.

The assistant console is equipped with a multifunctional keyboard including two suction housings. Thus the possibility to accommodate both the syringes and or the curing light. The console is mounted on a wide horizontal arm allowing the operator to move smoothly within the working area. As an optional, you can request the pantograph arm that can be associated with both horizontal and vertical motion.

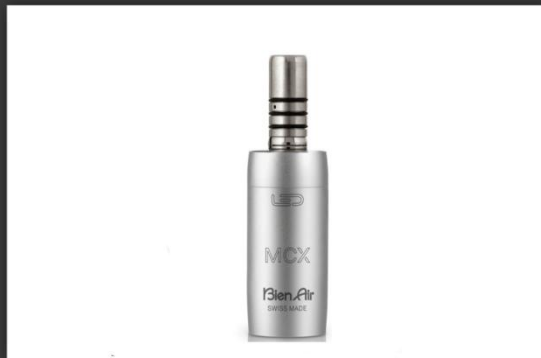

HANDPIECES

BIEN AIR MICROMOTOR

BIEN AIR MCX Led Micro motor with adjustable LED light is the smallest and lightest micro motor inducer.

The MCX Bien Air Micro motor is equipped with Fibre Optic Led, autoclavable, ultra-light, and has a standard speed of between 500 to 40,000 rpm

LUZZANI SYRINGES

The Luzzani minilight syringe is practical and handy! It consists of both tips and grips, which are both extractable and can be sterilized in the autoclave at 130 °.

The Luzzani Mini-Bright Syringe has a sophisticated and fluid design in its shapes, designed especially to make the handle as smooth as possible. The stainless steel handle and the high quality of the other materials guarantee for a long durability and above all autoclave safe cleaning at 135 °.

HANDPIECES

SCALERS

EMS Piezo

Great precision is guaranteed thanks to controlled oscillations defined without energy loss in the form of heat, as a matter of fact cooling devices are not required.

SATELEC Newtron Scaler

100,000 LED lux headpieces give excellent visibility even in the rear areas. Equipped with 6 powerful and long-lasting LEDs that emit cold light (6000-7000 °K) for a better tissue differentiation.

TKD Titanus Scaler

The equipment allows the removal of tartar in a simple and fast manner. The handheld titanium transducer ensures high reliability and better power output. Vibrations generated are linear and longitudinal.

PEDALS

A Valuable ally! With a simple gesture, you can activate various functions of the unit. Choose from three different types of pedals whatever does it for you! with its steel base, it is solid and heavy in order to provide stability in positioning on the floor.

3 types of pedals, same features and functions. From the pedal you can:

- activate and adjust the tools;
- activate Chip – Air and Chip – Blower;
- move the chair through the joystick;
- activate the rinsing and resetting position;
- activate the water command to the glass;
- on-off operating light when no instrument is taken;
- manage the intra-extra oral digital camera.

Choose from standard, push and WI_FI versions!

CUSPIDOR

The NICEONE cuspidor is removable and autoclavable just like water dispensers. In a few gestures all the safety and hygiene needed!

LAMPS

Visible quality. A partner of excellence for our lamps.
Choose between Halogen or Led light, whichever FARO lamp is the right one for you!

STOOLS

You can choose among our three different models. All with seamless leather and a comfortable seating with height adjustment.

Ring footrests available as a request optional.

- Roller Model – Round seat with semi-circular backrest/armrest adjustable in height.
- Planet Model – Height adjustment / tilt back and lumbar support with a single lever.
- Wild model – horse saddle ideal for ergonomic spine. Wide base for fluid movement.

ACTIVE AND PASSIVE HYGIENE

ANTI-RETRACTION SYSTEM

It ensures the blockage and the return of liquids from the instruments preventing the contamination of the water-spray circuits.

- Fast guide tray, the tray is easily removable to be sterilized in autoclave.
- White silicone mat where instruments can be placed.
- Water dispenser to cup /cuspidor.

HYDRIC GROUP Disinfection System

Compact and ergonomic, it rotates with the assistant's arm to 50 ° maximizing the operating space. With a convenient screw opening it contains the technological heart of the dental unit. As a standard feature, the independent water supply bottle containing distilled water is present on all versions of the NICEONE mod.

Model : Nice Touch Dental chair

FREEDOM IN MOVEMENT

It is possible to move and handle the chair as desired. 7 programmable positions to perfectly match your needs with your work. Seat and footrest handling is Synchronized and independent from the seat. It is possible to set 4 working positions in addition to the appropriate memorizing position setting for:

- Rinsing / last position with automatic ON / OFF op. lamp;
- Zero position;
- Trendelenburg facility.

Simply manageable: Recall most of the memorized positions directly by the pedal

DENTIST CONSOLE

All at your fingertips! The operator table is mounted on self-locking arms with an automatic lock. It is specifically designed to accommodate up to 6 instruments and support three different tray sizes! You can customize the tablet as to your liking, choosing between the S.P.R.I.D.O or the hanging hoses versions. Whatever your preferences are, our compact, adjustable and balanced table will allow you to work comfortably and safely. The varnished polyurethane surfaces and autoclavable handles ensure maximum hygiene and durability over time.

TOUCH KEYBOARD

NICETOUCH's keyboard is equipped with an LCD touch screen, where you can customize various parameters for both the chair and the handpiece. For each tool there is a reference menu, that has simple and intuitive graphics, which allows you to set and customize the parameters.

There are 3 different ways to use the scaler: SCALING, PARO or ENDO with the possibility of external irrigation by a peristaltic pump.

For surgical micromotors there are two specific programs. Endodontics and surgery has never been so easy!

INSTRUMENTS

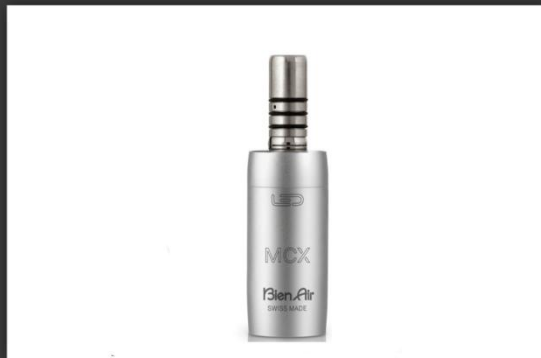

The assistant console is home to two suction cups mounted on removable and autoclavable supports. Thanks to an optical sensor, the activation of the instrument is carried out automatically and it is possible to independently adjust the cannulas. On the console, there are two more housings for an extra syringe and/or light cure.

HANDPIECES

BIEN AIR MICROMOTOR

BIEN AIR MCX Led Micro motor with adjustable LED light is the smallest and lightest micro motor inducer.

The MCX Bien Air Micro motor is equipped with Fibre Optic Led, autoclavable, ultra-light, and has a standard speed of between 500 to 40,000 rpm

MX2 Bien Air Micro motor with peristaltic pump, induction micro motor with adjustable LED lighting.

The Bien-Air MX2 micro motor, the most powerful over the range, simplifies and optimizes restoration, endodontics and prophylaxis. The SMART LOGIC Electronic Management automatically adjusts the power of the micro motor by immediately compensating for the variations in speed.

HANDPIECES

LUZZANI SYRINGES

The Luzzani minilight syringe is practical and handy! It consists of both tips and grips, which are both extractable and can be sterilized in the autoclave at 130 °.

The Luzzani Mini-Bright Syringe has a sophisticated and fluid design in its shapes, designed especially to make the handle as smooth as possible. The stainless steel handle and the high quality of the other materials guarantee for a long durability and above all autoclave safe cleaning at 135 °.

Customize your operating table by choosing the hanging hoses version. With the same features and predispositions but different work ergonomics, designed to support the movements to the best.

CUSTOMIZATIONS

NICE GLASS W

For those who love freedom of movement and do not want to give up the comfort of their patients, a chair + CART is available. The unit is equipped with the dentist's console on a mobile cart connected to the chair instead of being on the arm.

CUSTOMIZATIONS

LEFT HANDED VERSIONS

The unit is designed also for left handed practitioners. Different ergonomics designed to facilitate your work flow, yet at the same time, comfortable!

CUSTOMIZATIONS

STAND ALONE CART

Where you want, whenever you want! With the stand-alone cart, you can easily move between multiple locations without having to give up on anything! Equipped to house up to 6 instruments, it has an independent water supply bottle and its own multifunctional pedal.

High End Dental Chairs

Model: Universal ML

Tuned into your needs

The first dental unit in the world with a built-in microscope. Dental Units for all treatment dentistry branches. Very stable dental unit recommended for the installation on board of Microscope, LED lamp with Video Camera, Endo-oral Xray.

Free standing installation & compact dimensions.

High standard quality of the materials:

- Aluminium Casting - Metal Sheet using for the chair.
- Stainless Steel - Metal Sheet - Porcelain using for the water box.
- Aluminium, Stainless Steel, Polyurethane using for the dentist and assistant elements.

Connections into column water box. Floor Standing Independent Chair.

The Dental Unit is an electrical pneumatic treatment unit equipped with:

- 5 Instruments Dentist Element (Syringe + 4 dynamic instruments), with hoses S.P.R.I.D.O. system (kinematic system with reduced expansion in height, movements very fluid and devoid of inertia);
- The Element is connecting with the water box by a spring self-balanced adjustable arm;
- Sterilizable tray cover, handle, instrument support;
- Information about instruments usage data showed on the display;
- 3 programmes for micromotor/s and scaler/endo/perio, acoustic buzz for micromotor reversal;
- controls for spittoon rinsing and cup filling with timer;
- assistant call or door opener;
- chair controls;
- customized programmes for 4 different users;
- diagnostic service on display;
- on\off lamp command (can be enabled automatic control);
- Column water box, 90° swivel porcelain spittoon, with integrated safety sensor;
- Assistant table equipped on articulated and pantograph arm;
- Assistant table 3 instruments holder (Syringe + 2 Suction hoses)
- Keyboard controls for spittoon rinsing and cup filling with timer, chair controls (manual + zero/rinsing/last positions + 3 programmes), lamp on/off;

Patient Chair model MOON with:

- Floor Standing Chair Version
- Super Memory Upholstery;
- Headrest with double articulation;
- Synchronized Trendelenburg Movement;
- Upholstery left armrest;
- 3 programs may be-set by the operator with automatic movement to zero-position, rising position and to the last work position.
- Un-dress Compensation Backrest chair;
- Footpad on basement for chair controls.

Foot Control designed smart and comfortable usage;

- Turbine Drive and Chip Blower Drive
- Micromotor Dynamic and Chip Blower Drive
- Micromotor Inverse Drive
- Scaler Drive
- Chair Drive.

In detail

DELIVERY SYSTEM

Ergonomic, with a display for all the functions. The silicone instrument-support and handle-cover are autoclavable.

STABILITY

The Universal chair floor version avoids any oscillation when using the microscope.

In detail

ASSISTANT ARM

With a pantographic movement giving more autonomy to the dentist

INTEGRATED MICROSCOPE

Microscope Kaps with a 210° tilting binocular tube and optional built-in video system for recording.

Thank you
